The invention relates to novel genes (ABV83682-ABV84101) and proteins (ABP66710-ABP67129) useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (ant) agonists are useful in the nucleic acids, proteins, antibodies and (ant) agonists are useful in the adagnosis, treatment and prevention of: (a) cancer, e.g. breast and ovarian cancer and other cancers of the adrenal gland, bone, bone marrow, breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune consemna, autoimmune thyroiditis, diabetes mellitus, Crohn's disease, multiple sclerosis, rheumatoid arthritis and ulcerative colitis; (c) cardiovascular disorders such as myocardial ischaemias; (d) wound healing; (e) neurological diseases e.g. cerebral anoxia and epilepsy; and (f) infections. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from MIPO at fip.wipo.int/pub/bublished_pot_sequences

us-10-029-436-1.rng

Disclosure, Page 308-309; 363pp; English.

The invention relates to isolated nucleic acids encoding novel polypeptides. The nucleic acids are useful for chromosome mapping, for radiation hybrid mapping, for detection cancer, in gene therapy, for identifying individuals from minute biological samples, as an alternative to restriction fragment length polymorphism (RFLP) analysis, in forensic biology and as hybridisation probes for differential identification of tissues or cell types present in a biological sample. Compositions comprising the polymorlectides, polypeptides and antibodies specific for the polypeptides may be used in the diagnosis, prognosis, prevention and/or treatment of kidney disorders (e.g. glomerulonephritis, urinary tract infections, chronic nephritis), cardiovascular disorders (e.g. thrombosis, anaemia, haemoglobin abnormalities), blood disorders (e.g. thrombosis, anaemia, haemoglobin abnormalities), electrolyte imbalance, neoplastic disorders (e.g. cancers), respiratory disorders (e.g. Alzheimer's disease, Parkinson's disease, Huntington's disease).

Sequences ACD01492-ACD01506 represent human genomic DNA molecules of the invention

03-CCT-(HUMA-) HUMAN GENOME SCI INC. 05-JAN-2001; 

The invention relates to one of 238 disclosed human neoplastic diseaseassociated polypeptides encoded by 171 disclosed cDNA sequences
(including their domains, epitropes, full-length proteins, allelic variants
or species homologues). Also included are there encoding nucleic acids, a
comprising the nucleic acid (expressing the protein), an isolated
antibody that binds specifically to the isolated polypeptide, preventing,
treating or ameliorating a medical condition, diagnosing a pathological
condition or a useeptibility to a pathological condition in a subject,
in a biological assay, and the gene corresponding to the CDNA sequence.
The polypeptides, polypuclectides and antibodies are useful for
the polypeptides, polymuclectides and antibodies are useful for
the polypeptides, polymuclectides and antibodies are useful for
centering medical conditions such as hyperproliferative diseases or
conner, autoimmune disorders (e.g. diabetes, rheumatoid arthritis,
systemic lupus erythemacosus, multiple sclerosis, autoimmune thyroiditis
or haemolytic anaemia), haematopoietic or haematologic disorders (e.g.
caneemia or thrombocytopaenia), allergic reactions including asthma or
ceczema, inflammatory disorders (e.g. ischaemia-reperfusion injury,
inflammatory bowel disease or Crohn's disease), neurodegenerative New isolated human neoplastic disease-associated polypeptides and polynucleotides, useful for diagnosing, preventing, prognosticating or treating medical conditions such as cancer, AIDS, diabetes or Parkinson's Disclosure; SEQ ID NO 592; 302pp; English

This invention describes a novel human monoamine receptor-1 (MAR1) gene (I) which has cytostatic activity and can be used for gene therapy. (I), and derived (anti)sense oligonucleotides, are useful in treatment and diagnosis of (I)-related diseases (possibly tumours and psychiatric disorders), for producing transgenic/knockout animals, and for recombinant expression of the protein (II) that it encodes. (II) is useful in ligand-binding studies and screening assays, also for treatment and diagnosis of (II)-related diseases. This sequence encodes the human MAR1 monoamine receptor-1 protein
 monoamine receptor-1 gene, MAR1, useful for diagnosis and treatment

human G-protein coupled receptor and are used in vaccines to protect mammals from infections e.g. bacteraial, fungal, protozoan and viral infections (especially infections caused by HIV-1 or HIV-2), cancers and Parkinson's disease. The HNFUDIS polypeptides can be used to produce antibodies which are used to treat such infections, isolate or identify clones expressing the polypeptide or to purify the polypeptide. The polypeptide or to purify the polypeptide or activating or inhibiting activation of HNFUDIS. They can be used to activating or inhibiting activation of HNFUDIS. They can be used to activity of HNFUDIS
 Human G-protein coupled receptor, HNFJD15 - used e.g. in treatment and diagnosis of infections e.g. by HIV-1, HIV-2 and cancers and screening antagonistic or agonistic compounds.

(first entry)

Human DNA for potential G protein-coupled receptor #27.

Human; G protein-coupled receptor; GPCR; ds; GAL4; galanin receptor; Alzheimer's disease; amyotrophic lateral sclerosis; asthma; atcherosclerosis; basal carcinoma; breast carcinoma; cardiomyopathy; chondrosarcoma; chronic obstructive pulmonary disease; Crohn's disease; depression; epilepsy; macular degeneration; lymphoma; melanoma; multiple sclerosis; osteoarthritis; osteoporosis; Parkinson's disease; psoriasis; rheumatoid arthritis; osteoporosis; Parkinson's disease; tuberculosis; cognition disorder; memory disorder; anorexia; hormonal release disorder; cardiovascular activity disorder;

The invention relates to an isolated polypeptide encoded by a nucleic acid molecule that is at least 80% identical to the G protein-coupled (GPCR) polynuclachided in the specification. Also included are probes based on the GPCR sequences (including antieense probes), a host call comprising an expression vector comprising the GPCR sequence. Carlibodies raised against the polypeptides, and methods of identifying modulators of the polypeptides are useful for repressors, agoniets or antagonies of the novel GPCR polypeptides or including the GAL4 polypeptide. The antibodies and nucleic acid probes as including the GAL4 polypeptide. The antibodies and nucleic acid probes as including the GAL4 polypeptide. The antibodies and nucleic acid probes as including the GAL4 polypeptide. The antibodies and nucleic acid probes as and nucleic acids and are used to discorders of the polypeptides. Carcinoma, brast carcinoma, are the constructive polymerical sclerosis asthma, atheroselerosis, basal cell carcinoma, brast carcinoma, actions of disease, depression, epilepsy, macular degeneration, lymphoma, melanoma, multiple sclerosis, basal cell carcinoma, schizophrenia, ulcerative collitis, tuberculosis and many other osteoarthritis, schizophrenia, ulcerative collitis, tuberculosis and many other cates disorders, observation and memory disease, portasis, hormonal crelease disorders, cardiovascular activity disorders, pain perception disorders, observations and many other cates or increase the expression of galanin receptor (GAL4) can that decrease or increase the expression of galanin receptor for the probe and such or be used to treat observy, diabetes, hyperlipidaemia and stroke. The GPCR that decrease or increase the expression of galanin receptor galaning the colling the probes and such or be used to treat observy. actures usering to above mentioned disorders by generations. The present sequence is a novel GPCR polynucleotide Novel G protein-coupled receptor polypeptides including galanin receptor polypeptides useful for identifying modulators that are useful for treating Alzheimer's disease, psoriasis, melanoma, multiple sclerosis, Gaps 0, Length 1546; pain perception disorder; obesity; diabetes; obesity; diabetes; hyperlipidaemia; stroke; gene therapy. /dev stage="fetal and adult"
//dev stage="fetal and adult"
//dev stage="fetal and adult"
//dev stage="DH10B (Life Technologies) (TI phage resistant)"
//cole=_[115="UT-E-EU0"
//note=_[07gan: eps' Vector: pT7T3-Pac (Pharmacia) with a modified polylinker; Site 1: ECOR I; Site 2: Not I;
UI-E-EU0 is a subtracted cDNA library constructed according to Bonaldo, Lennon and Soares, Genome Research, 6:791-806, 1996. First strand cDNA synthesis was primed with an oligo-dT primer containing a Not I site. Double stranded cDNA was ligated to an ECOR I adaptor, digested with Not I, and cloned directionally into pT7T3-Pac vector. The oligonucleotide used to prime the synthesis of first-strand cDNA contains a library tag sequence that is located between the Not I site and the (GT)18 tail. The sequence tags for this library are: fetal eyes, AGANTCAAGA; lens, CAGATTAGGAS, eye anterior segment, AAGACCGAT; optic nerve, CCATTAAGTG; retina, CCGC; Retina Foveal and Maculau, GTCC; RPE and Choroid, ACCTA. This library was created for the program, Gene Discovery in the Visual System, supported by National Eye Institute (NEI)."

Library constructed by Dr. Yutaka Suzuki and Dr. Sumio Sugano in
the Human Genome Center, University of Tokyo Institute of Medical
Science; tissue and RNA were prepared in the Department of Large
Animal Medicine, University of Georgia; sequencing done in the
Laboratory for Genomics and Bioinformatics, University of Georgia.
Sequence ends have been trimmed to exclude vector and regions below
Phred quality 16. Three-prime sequences are presented as their
reverse complement and have been trimmed to exclude polyA.
Seq primer: Sugs (CrTTGGTCTARAAACTGGG).

Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

```
SEQUENCING READ COVERAGE:Sequencing is completed to a minimum standard of double strand coverage with a minimum of 2 clones and 2 reads with no ambiguities or 2 chemistries with a minimum of 2 clones and 3 reads with no ambiguities. If the sequence quality for a region does not meet this standard, it will be indicated in the annotation as Low Coverage.
 CLONE LENGTH: This sequence does not necessarily represent the entire insert of this clone. Overlapping regions of clones are only sequenced and submitted once, so the sequence for the remainder of the insert may be found in the record for the adjacent clones. Overlapping clones are noted at the beginning and end of the Peatures listing.
 ANNOTATION OF FEATURES:

STGS are identified using ePCR (Genome Res. 7:541-550) searches of a local database that includes entries from dbSTS, GDB, and local mapping efforts.

Repeats are identified using RepeatMasker (A. Smit and P. Green, unpublished.) for luman and Mouse sequences. Genes and Region of sequence similarity are identified by BLAST (Nuc. Acids Res. 25:3389-3402) similarity (expect < 1e-34) to the EST and cDMA sequences. Genes demonstrate at least two exons flanked by consensus splice sites that maintained sequence continuity across the splice junctions. Sequences that are not identical matches are annotated as similar.

 QUALITY OF INDIVIDUAL BASES:This sequence meets stringent quality standards - estimated error rate less than 1 per 10,000 bases. Reports of lowest quality individual bases and measures of base quality are listed below. Description of the metrics can be found

High, Throughput Mouse Sequencing
 Center project name: AAT 20152
Sequencially vector: pUC18, 108752
Chemistry: Dye-terminator Big Dye, 1008
*Consensus quality: 193187 at least Q20
*Consensus quality: 190826 at least Q30
*Consensus quality: 186718 at least Q40
Bstimated insert size: 20691 - sum-of-contigs
Quality coverage: agarose-FP - N/A
Quality coverage: 6.5 x in Q20 bases; sum-of-contigs estimation
NOTE: This is a 'working draft' sequence. It currently consists of 23 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

 Submitted (10-JUL-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA

3 (Dases 1 to 244845)

Rat Genome Sequencing Consortium.

Direct Submission

5 (Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA

On Sep 10, 2002 this sequence version replaced gi:21722958.

The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequening reads assembled using Atlas (http://www.hgsc.bcm.tmc.edu/projects/rat/). As a result, the sequence may extend beyond the ends of the clone and there may be contigs that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature table.

Consensus quality: 225716 bases at least Q30
Consensus quality: 22647 bases at least Q30
Consensus quality: 22647 bases at least Q30
Consensus quality: 22647 bases at least Q30
Consensus quality: 2264741; sum-of-contigs estimation
Quality coverage: 4x in Q20 bases; sum-of-contigs estimation
 NOTE: Estimated insert size may differ from sequence length (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
NOTE: This is a "working draft' sequence. It currently consists of 1 contigs. Gaps between the contigs are represented as runs of N. The order of the pieces of the gaps between them are based on estimates that have provided by the submittor.

This sequence will be replaced by the finished sequence as soon as it is available and the accession number will be preserved.

1 244845: contig of 244845 bp in length.

ACO16463. AC | Galagan, J., Gardyna, S., Grant, G., Hagos, B., Heaford, A., Horton, L., Galagan, J., Gardyna, S., Grant, G., Hagos, B., Heaford, A., Horton, L., Howland, J.C., Johnson, R., Jones, C., Kann, L., Karatas, A., Klein, J., Lehoczky, J., Lieu, C., Locke, K., Macdonald, P., Marquis, N., McGurk, A., McKernan, K., McLaughlin, J., Maldrin, J., Morrow, J., Naylor, J., Norman, C.H., O'Connor, T., O'Donnell, P., Peterson, K., Pollara, V., Killey, R., Roy, A., Santos, R., Severy, P., Stange-Thomann, N., Stojanovic, N., Subramanian, A., Talama, J., Wwan, D., Yew, W.J., Zimmer, A. and Zody, M.  TITLE Direct Submission  Negerach, 320 Charles Street, Cambridge, MA, 02141, USA  On Mar 3, 2000 this sequence version replaced gi:6910791.  All repeats were identified using RepeatMasker:  Smit, A.F. A. & Green, P. (1996-1997)  http://ftp.genome.washington.edu/RM/RepeatMasker.html | Center project name: 13130  Center clone name: 10_0_9  * NOTE: This record contains 152 individual  * sequencing reads that have not been assembled into  * contigs. Runs of N are used to separate the reads  * and the order in which they appear is completely  * arbitrary. Low-pass sequence sampling is useful for  * identifying clones that may be gene-rich and allows  * overlap relationships among clones to be deduced.  * However, it should not be assumed that this clone  * will be sequenced to completion. In the event that  * the record is updated, the accession number will  * be preserved. |

gene (I),
 treatment
 This invention describes a novel human monoamine receptor-1 (WAR1) gen and derived (anti)sense oligonuclectides, are useful in treatment and diagnosis of (anti)sense oligonuclectides, are useful in treatment and diagnosis of (I)-related diseases (possibly tumours and psychiatric disorders), for producing transgenic/knockout animals, and for recombinant expression of the protein (II) that it encodes. (II) is resetul in ligand-binding studies and screening assays, also for treatment diagnosis of (II)-related diseases. This sequence encodes the huma

 The present sequence is that of nucleic acid encoding a human orphan G-protein coupled receptor, designated hp15a. The sequence was initially identified in a human placenta genomic library using probes representing transmembrane domains III, V and VI of human serotonin 5-HYIDbeta receptor. The encogenous ligand for hp15a is likely to be a neuromodulator annee the receptor is present in several regions of the human brain. The invention provides hp15a nucleic acids, vectors, host cells, antibodies, probes, antisense oligonuclectides, transgent non-human animals, methods of isolating the receptor; methods of transfer abnormality that is associated with activity of hp15a e.g. cardiovascular or gastrointestinal disorders, and methods of determining binding of
 of treating an cardiovascular
 New recombinant nucleic acid, useful for preparing a composition for treating disorders linked to human hpl5a receptor e.g. cardiovascular or gastrointestinal disorders.

This cDNA encodes a human 7-transmembrane receptor, HNFUD15. HNFUD15 is a human G-protein coupled receptor and are used in vaccines to protect mammals from infections e.g. Datcherial, fungal, protozoan and viral infections (especially infections caused by HIV-1 or HIV-2), cancers and Parkinson's disease. The HNFUD15 polypeptides can be used to produce antibodies which are used to treat such infections, isolate or identify clones expressing the polypeptide or to purify the polypeptide. The polypeptide or to purify the polypeptide. The polypeptide or activating or inhibiting activation of HNFUD1S. They can be used to activating or inhibiting activation of HNFUD1S. They can be used to activity of HNFUD1S.
 Human G-protein coupled receptor, HNPJD15 - used e.g. in treatment and diagnosis of infections e.g. by HIV-1, HIV-2 and cancers and screening of antagonistic or agonistic compounds.

Novel G protein-coupled receptor polypeptides including galanin recept polypeptides useful for identifying modulators that are useful for treating Alzheimer's disease, psoriasis, melanoma, multiple sclerosis,

Disclosure; Page 130-131; 144pp; English.

The invention relates to an isolated polypeptide encoded by a nucleic acid molecule that is at least 80% identical to the G protein-coupled (GPCR) polynucleotides included in the specification. Also included are probes based on the GPCR sequences (including antisense probes), a host cell comprising an expression vector comprising the GPCR sequence, antibodies raised against the polypeptides, and methods of identifying modulators of the polypeptides are useful for identifying modulators or antagonists of the novel GPCR polypeptides for expressors, agonists or antagonists of the novel GPCR polypeptides including the GAL4 polypeptide. The antibodies and nucleic acid probes as described above can be used to disagnose a variety of diseases. C described above can be used to disagnose a variety of diseases or and nucleic acid and are used to disagnose a variety of diseases or disorders in which GPCRs are involved e.g., Alzhaimer's diseases or amyorrophic lateral sclerosis, asthma, atherosclerosis, basal cell carcinoma, breast carcinoma, atherosclerosis, basal cell carcinoma, pracessor, carcinoma, actioning disease, confined disease, depression, epilepsy, macular degeneration, lymphoma, melanoma, multiple sclerosis, rheumatoid or steasthritis, schlopprosis, Parkinson's disease, portasis, rheumatoid arthritis, schloppresses, Cromn's disease, perferably, compounds disorders, obesity, diabetes, Alzheimer's disease. Perferably, compounds that decrease or increase the expression of glanain receptor (GAL4) can disorders, obesity, diabetes, Alzheimer's disease. Perferably, compounds that decrease or increase the expression of glanain receptor (GAL4) can be used to treat obesity, diabetes, hyperlipidaemia and stroke. The GPCR nucleic acid is useful for treating the above mentioned disorders by gene therapy techniques. The present sequence is a novel GPCR polynucleotide

The invention relates to a novel method for identifying a candidate p21 pathway modulating agent. The novel method comprises contacting an assay system, comprising a purified MP21 polypeptide (modifier of p21) or nucleic acid, with a test agent under conditions, so that but for the presence of a test agent. The assay system provides a reference activity and detection of test agent-biased activity of the assay system. The novel method of the invention is useful for identifying a candidate p21 pathway modulating sent. The invention also includes a method for modulating the p21 pathway of a cell, and a method for diagnosing a disease e.g. cancer in a patient. The identified modulators are useful in diagnosis, therapy and pharmaceutical development. The modulators are useful in a variety of diagnostic and therapeutic applications including angiogenic, apoptotic and cell proliferation disorders. This polynucleotide sequence represents a gene encoding an MP21 protein of the

WPI; 2001-465573/50. P-PSDB; AAM99936.

Isolated digestive system associated polypeptide for treating, preventing and/or prognosing disorders related to the digestive system including digestive system cancers and also for testing and detection e.g. diagnosis.

Claim 1; SEQ ID NO 11; 509pp + Sequence Listing; English.

The invention relates to novel genes (AA199548-AA199604) and proteins (AAM99936-AAM99984) useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (ant) agonists are useful in the adagnosis, treatment and prevention of: (a) cancer, e.g. breast and ovarian cancer and other cancers of the adrenal gland, bone, bone marrow, breast gastrointestinal tract, liver, lung, or urogenital; (b) immune disorders e.g. Addison's disease, allergies, autoimmune haemolytic anaemia, autoimmune thyrodidits, dabates mellitus, Crohn's disease, multiple sclerosis, rheumatoid arthritis and ulcerative colifis; (c) cardiovascular disorders such as myocardial ischaemias; (d) wound healing; (e) neurological diseases e.g. cerebral anoxia and epilepsy; and (f) infections diseases such as viral, bacterial, fungal and parasitic infections. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from MIPO at ftp. Wipo.int/pub/published\_pot\_sequences

```
The present nucleic acid sequence represents cDNA encoding EX33, a human inflammatory disease-related G-protein coupled receptors (GPCR). G-protein coupled receptors (GPCR). G-protein coupled receptors are important targets in therapeutic applications because they are involved in a wide variety of physiological and pathological processes. The invention comprises the use of the EX33 polyapeptide and polynucleotide in the diagnosis or treatment of a neutrophil-associated inflammatory disease. The EX33 polyapeptide, and antibody specific to the EX33 polyapeptide, an antibody specific to the EX33 polyapeptide, and an antibody specific to the EX33 polyapeptide, and an associated with a second of the EX33 polyapeptide, and an associated second in the diagnosis or treatment of neutrophilapoly, adult respiratory disteases syndrome (ARDS), rheumatoid arthritis, and inflammatory bowel diseases (e.g., Crohn's disease and

The present invention relates to the isolation of novel human uterine motility-association polypeptides (AAU18094-AAU18152), and cDNA and genomic sequences encoding for these polypeptides. The sequences of the invention are useful in the diagnosis, treatment, prevention and/or prognosis of diseases associated with uterine motility such as pregnancy and labour, and menstrual disorders. The polymorlectide sequences of the invention are also useful in gene therapy. AAS28995-AAS29020 represent genomic sequences encoding for novel human uterine motility-association polypeptides. Note: The sequence data for this patent did not form part dit by printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
 New nucleic acid molecules encoding 49 human secreted proteins for diagnosing, preventing, treating or ameliorating medical conditions and used as food additives or preservatives.

The invention relates to novel nucleic acids and polypeptides useful for diagnosing, treating, preventing and/or prognosing disorders related to these polypeptides. The polynuclectides are especially useful in the diagnosis, prognosis, prevention and/or treatment of diseases which include kidney disorders (e.g. renal failure or nephritis), cardiovascular disorders (e.g. hypertenaion or myocardial infarction), electrolyte imbalance disorders (e.g. hyponatraemia or hoperkalaemia), electrolyte imbalance disorders (e.g. hyponatraemia or hyperkalaemia), electrolyte imbalance disorders (e.g. hyponatraemia or hyperkalaemia), encoplastic disorders (e.g. nephtoma or renal cell cancer), autoimmune disorders, neural activity and neurological disorders, wound healing and respiratory disorders. AAS30165-AAS30251 represent the novel human renal and cardiovascular-associated nucleic acid sequences of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at: ftp.wipo.int/pub/published_pct_sequences
 New polynucleotides and polypeptides, useful for diagnosing, treating, preventing or prognosing e.g. kidney, cardiovascular, blood, electrolyte imbalance or neoplastic disorders, autoimmune diseases, cancers.

The present invention relates to the isolation of novel human neoplastic disease associated polypeptides (AAU21568-AAU21851), and CDNA and DNA sequences encoding for these polypeptides. The sequences of the invention are useful in the diagnosis, treatment, prevention and/or prognosis of disorders involving neoplastic disease such as hyperproliferative disorders (e.g. leukaemia, bone cancer, bladder cancer, brain stem glioma, adult liver cancer, childhood cerebellar astrocytoma, or Hodgkin's lymphoma). The sequences of the invention may also be useful for treating other disorders, such as neural disorders, immune system disorders, muscular disorders, cardiovascular disorders, gastrointestual disorders, pulmonary disorders, cardiovascular disorders and renal disorders. The polymucleotide sequences of the invention are also useful in gene therapy. AAS30051-AAS30155 represent DNA sequences encoding for the novel human neoplastic disease associated polymeptides of the cinvention. Note: The sequence data for this patent did not form part of invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/bublished\_pot\_sequences 1056 1116 480 540 360 420 969 120 240 876 300 936 966 756 180 816 Novel polypeptides and polynucleotides useful as diagnostic reagents to diagnose diseases or disorders associated with aberrant expression or activity of polypeptides, and for treating cancers, rheumatoid arthritis. 1057 CIGGIGAGCACCIGGGIIGIGGGCGIGGCCACTITGCICCCCCTCIGGCCTAITTAIAIC 817 AACCTCACACAGGGGGTGATCTCCTCTACTGCAGGCTCCTTCAGCCCTTCTGTGGACACC TACCTCCACCTGCACTGGCGCACCGGTGCCACCTTCTGCAGGGTATTTGGGGCTCCTCCTT 301 ITTGCCTCCAATTCTGTCTCCATCCTGACCCTCTGCCTCATCGCACTGGGACGCTACCTC creameceaccenalectriticeceaactricaereceaagganageera checracergraererecaecrecaecrrreaceecareceaeceeceecerracaeceec 1 ATGTGGAACAGCTCTGACGCCAACTTCTCCTGCTACCATGAGTCTGTGCTGGGCTATCGT TATGTTGCAGTTAGCTGGGGGGGGGGGGGGGGCACCGTGGGCAATGTGCTC 121 ACCCTACTGGCCTTGGCCATCCAGCCCCAAGCTCCGTACCCGATTCAACCTGCTCATAGCC Acceracidecerroecearceaeceaaecreceraeceearreaacerecrearaece 181 AACCTCACACTGGCTGATCTCCTCTACTGCACGCTCCTTCAGCCCTTCTGTGGACACC CTCATTGCCCACCCTAAGCTTTTTCCCCAAGTGCCAAGGGGATAGTGCTGGCA CTGGTGAGCACCTGGGTTGTGGGCGTGGCCAGCTTTGCTCCCCTCTGGCCTATTTATATC Gaps ô Length 2046; Sequence 2046 BP; 500 A; 525 C; 515 G; 506 T; 0 U; 0 Other; Indels DB 4; .; 0 100.0%; Score 1191; 100.0%; Pred. AAKS4951 to AAK64702 encode the human immune/haematopoietic antigen (I) amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic activity, and can be used in gene therapy and vaccine production. (I) proteins and polynucleotides may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate (I) expression. For example, they may be used to treat disorders associated with decreased example, they may be used to treat disorders associated with series that affect the activity of (I) by expressing inactive proteins or to supplement the patients own production of (I). Additionally, (I)
 Nucleic acids encoding human immune/hematopoietic antigen polypeptides, useful for preventing, diagnosing and/or treating cancers and metastasis.

polynucleotides may be used to produce the secreted (1), by inserting the nucleic acids into a host cell and culturing the cell to express the protein. (1) proteins and polynucleotides may be used to prevent, diagnose and treat immune/haematopoietic-related diseases, especially cancers and cancer metastases of haematopoietic educived cells. AAK64703 to AAK87694 represent human immune/haematopoietic antigen genomic sequences from the present invention. AAK5492 to AAK54950 and AAM82169 represent sequences used in the exemplification of the present invention

 The present invention provides human cDNAs, proteins and related genomic DNAs. These can be used in the treatment of neural, immune system, muscular, reproductive, gastrointestinal, pulmonary, cardiovascular, renal and proliferative disorders and inflammation. The present sequence is a genomic DNA of the invention
 09
 Isolated nucleic acid molecule encoding an inflammation-associated polypeptide is used in preventing, treating or ameliorating a medical condition.

The invention describes an isolated nucleic acid molecule (I) encoding a novel central nervous system protein. (I) and polypeptides (III) encoded by (I), are used to treat a medical conditions and in diagnosis of a pathological condition. Disorders which are diagnosed or treated include autoimmune diseases e.g. rheumatoid arthritis, hyperproliferative curdiac arrest, cerebrovascular disorders e.g. cardiac arrest, cerebrovascular disorders e.g. corneal infection, gastrointestinal disorders e.g. dysphagia, anylotrophic lateral sclerosis, infections caused by bacteria, viruses e.g. corneal infection, gastrointestinal disorders e.g. dysphagia, cancers end pituitary dwarfism, cancers and disorders e.g. dysphagia, adenocationmas and irritable bowel syndrome, reproductive system disorders e.g. testicular feminisation, endocrine disorders e.g. andipancies, crespiratory disorders involving neovascularisation e.g. malignancies, crespiratory disorders e.g. nonallarist, renal disorders e.g. malignancies, crespiratory disorders e.g. nonallarist chinitis, renal disorders e.g. certicular end blood related disorders e.g. malignancies, crespiratory disorders end blood related disorders e.g. malignancies, crespiratory tissues, to respendence an also be used to aid wound healing and epithelial cell proliferation, to prevent skin aging due to sumburn, to maintain organs before transplantation, for supporting cell culture of primary tissues, to respendence as a food additive or preservative to increase or decrease storage capabilities, fat content, lipid, protein, carbohydrate, vitamins, minerals, coffactors and other nutritional ated nucleic acid encoding a protein for diagnosing, preventing, or ameliorating medical conditions and used as food additives or SEQ ID NO 1209; 837pp; English.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

NCI_CGAP_FT2 is a subtracted down library constructed from a pool of 81 RNA samples from Alveolar Macrophages
challenged with different treatments. The library was subtracted according to Bonaldo, Lennon and Soares, Genome Research, 6:791-806, 1996. The tissue was provided by Dr.
Gary M. Hunninghake of the University of Iowa.

Library constructed by Dr. Yutaka Suzuki and Dr. Sumio Sugano in
Library constructed by Dr. Yutaka Suzuki and Dr. Sumio Sugano in
the Human Genome Center, University of Tokyo Institute of Medical
Science, tissue and RNA were prepared in the Department of Large
Animal Medicine, University of Georgia; sequencing done in the
Laboratory for Genomics and Bioinformatics, University of Georgia.
Sequence ends have been trimmed to exclude vector and regions below
Phred quality 16. Three-prime sequences are presented as their
reverse complement and have been trimmed to exclude polyA.
Seq primer: Sugs (CTTCTGCTCTAAAAGCTGCG).

//alob_host="Organ: eys, Vector: pT773-Pac (Pharmacia) with a modified polylinker; Site 1: EcoR I; Site 2: Not I;

U1-E-E-O is a subtracted cDNA library constructed according to Bonaldo, Lennon and Soares, Genome Research, 6:791-806, 1996. First strand CDNA sprithesis was primed with an oligo-dT primer containing a Not I site. Double stranded cDNA was ligated to an EcoR I adaptor, digested with Not I, and cloned directionally into pT773-Pac vector. The oligonucleotide used to prime the synthesis of first-strand cDNA contains a library tag sequence that is located between the Not I site and the (dT)18 tail. The sequence tags for this library are: fetal eyes, AGANTCAAGA; lens, CAGNTAGCGA; eye anterior segment, AGANTCAAGA; lens, CAGNTAGCGA; eye anterior segment, AGANTCAAGA; lens, CAGNTAGCGA; eye anterior segment, Foweal and Macular, GTCC; REE and Choroid, ACCTA. This library was created for the program, Gene Discovery in the Visual System, supported by National Eye Institute (NEI)."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     1011
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                1131
